

# Contents

<b>1</b>	<b>The simplest examples</b> .....	1
<b>2</b>	<b>Dynamical Properties of Measurable Transformations</b> .....	9
2.1	Basic definitions .....	9
2.2	Recurrent, conservative, and dissipative systems .....	16
2.2.1	Ergodicity .....	18
2.2.2	Kac's Lemma .....	18
2.2.3	Conservativity and Hopf decomposition .....	20
2.3	Noninvertible maps .....	23
<b>3</b>	<b>Attractors in Dynamical systems</b> .....	27
3.1	Attractors .....	27
3.2	Examples .....	29
3.3	Sensitive dependence .....	33
3.3.1	Unimodal interval maps .....	36
<b>4</b>	<b>Ergodic theorems</b> .....	41
4.1	The Koopman operator for a dynamical system .....	41
4.2	Von Neumann Ergodic Theorems .....	43
4.3	Birkhoff Ergodic Theorem .....	47
4.4	Spectrum of an ergodic dynamical system .....	50
4.5	Unique ergodicity .....	52
4.5.1	The topology of probability measures on compact metric spaces .....	53
4.6	Normal numbers and Benford's law .....	57
4.6.1	Normal numbers .....	58
4.6.2	Benford's law .....	59
4.6.3	Detecting financial fraud using Benford's law .....	60
<b>5</b>	<b>Mixing Properties of Dynamical Systems</b> .....	65
5.1	Weak mixing and mixing .....	67

5.2	Noninvertibility	75
5.2.1	Partitions	76
5.2.2	Rohlin partitions and factors	78
5.3	Parry Jacobian	80
5.4	Examples	83
5.5	Exact endomorphisms	83
<b>6</b>	<b>Shift spaces</b>	<b>87</b>
6.1	Full shift spaces and Bernoulli shifts	87
6.2	Markov shifts	92
6.2.1	Subshifts of finite type	96
6.3	Markov shifts in higher dimensions	97
6.4	Noninvertible shifts	99
6.4.1	Index function	99
<b>7</b>	<b>Perron–Frobenius Theorem and Some Applications</b>	<b>103</b>
7.1	Preliminary background	104
7.2	Spectrum and the Perron–Frobenius Theorem	106
7.2.1	Application to Markov shift dynamics	110
7.3	An application to Google’s PageRank	111
7.4	An application to virus dynamics	113
7.4.1	States of the Markov process	114
<b>8</b>	<b>Invariant measures</b>	<b>119</b>
8.1	Measures for continuous maps	119
8.2	Induced transformations	124
8.3	Existence of ACIP	128
8.3.1	Weakly wandering	131
8.3.2	Weakly Wandering Theorem	135
8.4	Classification of maps	136
<b>9</b>	<b>No equivalent invariant measures: Type III maps</b>	<b>141</b>
9.1	Ratio sets	142
9.2	Odometers of type II and type III	146
9.2.1	Krieger flows	150
9.2.2	Type III <sub>0</sub> dynamical systems	152
9.3	Other examples	153
9.3.1	Noninvertible maps	154
<b>10</b>	<b>Dynamics of automorphisms of the torus and other groups</b>	<b>157</b>
10.1	An illustrative example	157
10.2	Dynamical properties	161
10.3	Endomorphisms of $\mathbb{T}^n$	163
10.3.1	Ergodicity and mixing	167
10.4	Group rotations	169

<b>11</b>	<b>An introduction to entropy</b> .....	173
11.1	Topological entropy .....	175
11.1.1	Defining and calculating topological entropy .....	176
11.1.2	Hyperbolic toral endomorphisms .....	180
11.1.3	Topological entropy of subshifts .....	181
11.2	Measure theoretic entropy .....	183
11.2.1	Preliminaries for measure theoretic entropy .....	183
11.2.2	The definition of $h_\mu(f)$ .....	184
11.2.3	Computing $h_\mu(f)$ .....	186
11.2.4	An information theory derivation of $H(P)$ .....	189
11.3	Variational principle .....	191
11.4	Application to the papillomavirus genome .....	192
11.4.1	Algorithm .....	193
<b>12</b>	<b>Complex dynamics</b> .....	195
12.1	Background and notation .....	197
12.1.1	Some dynamical properties of iterated functions .....	200
12.2	Möbius transformations .....	201
12.2.1	The dynamics of Möbius transformations .....	202
12.3	Julia sets .....	203
12.3.1	First properties of $J(R)$ .....	206
12.3.2	Exceptional and completely invariant sets .....	207
12.3.3	Dynamics on Julia Sets .....	209
12.3.4	Classification of the Fatou cycles .....	212
12.4	Ergodic properties .....	213
12.4.1	Non-critical postcritically finite maps .....	218
<b>13</b>	<b>Maximal entropy measures on Julia sets and a computer algorithm</b> ..	223
13.1	The random inverse iteration algorithm .....	224
13.2	Statement of the results .....	225
13.3	Markov processes .....	228
13.3.1	Proof of Theorem 13.2. ....	231
13.4	Proofs of results .....	231
13.5	Ergodic properties .....	233
13.6	Fine structure .....	234
<b>14</b>	<b>Cellular automata</b> .....	239
14.1	Definition and basic properties .....	240
14.1.1	One-dimensional CAs .....	240
14.1.2	Notation for binary CAs with radius 1 .....	242
14.1.3	Topological dynamical properties of CA 90 .....	244
14.1.4	Measures for CAs. ....	246
14.2	Equicontinuity properties of CA .....	248
14.3	Higher dimensional CAs .....	251
14.3.1	Conway's Game of Life .....	253

14.4	Stochastic CAs	254
14.5	Virus dynamics	256
<b>A</b>	<b>Measures on topological spaces</b>	263
A.1	Lebesgue measure on $\mathbb{R}$	263
A.1.1	Properties of $m$	264
A.1.2	A non-measurable set	266
A.2	Sets of Lebesgue measure zero	267
A.2.1	Null sets	268
A.2.2	An historical note on Lebesgue measure	269
A.3	The definition of a measure space	269
A.4	Measures and topology in metric spaces	270
A.4.1	Approximation and extension properties	273
A.4.2	The space of Borel probability measures on $X$	275
A.4.3	Hausdorff measures and dimension	275
A.4.4	Useful tools	276
A.5	Examples	278
A.5.1	One dimensional spaces	278
A.5.2	Discrete measure spaces	279
A.5.3	Product spaces	280
A.5.4	Other spaces of interest	281
<b>B</b>	<b>Integration and Hilbert spaces</b>	287
B.1	Integration	287
B.1.1	Conventions	290
B.1.2	$L^p$ spaces	290
B.2	Hilbert spaces	292
B.2.1	Orthonormal sets and bases	292
B.2.2	Orthogonal projection in a Hilbert space	293
B.3	Von Neumann factors	296
<b>C</b>	<b>Connections to probability theory</b>	299
C.1	Vocabulary and notation of probability theory	299
C.2	The Borel-Cantelli lemma	303
C.3	Weak and strong laws of large numbers	305
	<b>References</b>	309
	<b>Index</b>	317
